Synopsis:

After playing n00d Raider Gold, the Lone Rapist (who has a thing for big muffs, the denser the better) breaks into Lara's mansion and tries to rape Lara Croft! The Lone Rapist and his creepy stalker Fucko manage to rip off some of her clothes before she can escape.

Now Lara travels to the Great Wall of China in search of the Dagger of Xian, an ancient dagger with the mystical power to permanently remove the user's pubic hair once and for all! (Beat that Nad's@!)

Will Lara find the Dagger of Xian? Can it really prevent her mingeey pubes from growing back? Will this make the Lone Rapist (who has a thing for big muffs, the denser the better) leave her alone? Can you manage to play this hack with only one hand? Will this hack utterly destroy your computer or PlayStation console? Is it really worth destroying these expensive things just to get a glimpse of a naked computer generated woman? Will Jesus come to save us all? And where is Waldo? Find the answers to all these questions and more by playing n00d Raider II today!

Instructions:

This is .ppf patch will only work on the PSX Tomb Raider II with the product ID:

SLUS 00437CE

This version of Tomb Raider II is included with the Tomb Raider Collector's Edition compilation for the PSX. This collection is very rare and I doubt you will find it on BitTorrent.

Sorry, but when I made the hack I had a shitty Internet connection, and the only way I could get a copy of the game was to actually buy it. At least Core Eidos can't sue me on the grounds that nude patches promote software piracy, since it will probably boost their sales anyway.

Use PPF-O-MATIC V3.0 to apply n00draider2.ppf to a .img or .bin ISO of this version of Tomb Raider II.

Also, only the first level (WALL.PSX) is hacked. If you really feel that she should be naked in Venice, then learn and understand the concepts in PSX Rosetta Stone and **hack the game yourself**.
